Improving Communication

**Idea #1 - Review company safety materials to ensure a consistent positive safety climate message**

There are many communication channels within an organization, both formal and informal. Mixed messages about safety and productivity can severely damage the mutual trust between employees and management that is necessary for a positive safety climate. Management should evaluate all materials and communication processes to ensure safety is consistently highlighted and equal to other company goals and objectives. Supervisors and foremen should be aware that their actions and behaviors can negatively affect communication or negate the message that safety is valued.

**Idea #2 - Communicate contents of policies and procedures to all employees**

Not all company policies and procedures focus on safety. However, even those that do not should be reviewed to see if there may be a safety component to include. Ensure policies and procedures are written clearly and are available and understood by all employees, including all non-English speaking employees. Take time to review policies and procedures with all employees at hire, at least annually, and also when any organizational changes occur.

**Idea #3 - Be transparent about how employees’ safety concerns will be addressed**

As issues arise, be visible and engage employees in reviewing related policies and procedures. Consider developing an online incident reporting system employees can use to notify management when a close call or hazardous condition occurs. Also consider creating an “action list” and post it in a visible place to show how issues raised by employees are being addressed.

**Idea #4 - Create opportunities to communicate directly with employees about safety**

Companies should use both formal and informal methods to facilitate consistent and open communication about safety among project owners, management, and employees. Open dialogue helps employees trust that management values safety, which empowers them to participate in protecting themselves and their co-workers. Project owners should be visible, accessible, and engage in two-way dialogue with employees. It is critical that management be sensitive to non-English speaking employees to ensure they can meaningfully participate in safety discussions. Some mechanisms for creating an open dialogue both on and off the jobsite include:

**4a. Joint employee-management engagement committees or safety action groups**

These committees distribute power and responsibility for safety-related decision making, which encourages mutual trust between employees and management. Barriers to employee participation should be eliminated.

**4b. Daily safety discussions**

Daily safety discussions (or huddles) provide an excellent opportunity to involve and empower employees in identifying and addressing hazards in a timely manner. They take approximately 15 minutes and are part of pre-task daily planning where possible hazards and how to prevent them are discussed.

**4c. Joint walk-arounds and informal conversations with employees**

A joint management-employee team site walk-around helps identify and address new concerns as they emerge during the day. Informal conversations with employees throughout the day are an effective way to reaffirm that safety is valued and promote ongoing two-way conversations between employees and management about potential safety concerns.
